

Composition, Encapsulation, and Polymorphism

As promised, this is part 2 of the object-oriented programming section of the course.

We've now covered the basics of object-oriented programming.

It's now time, to look at the remaining 3 major components of object-oriented programming.

Composition, Encapsulation, and Polymorphism

These are **Composition**, **Polymorphism**, and also **Encapsulation**.

By the end of this section, you should have a solid overview of what these concepts are, and also how to apply them to your programs.

Let's make a start on that right now.
