

# Introduction to the Collections Framework

---

Welcome to the Collections Framework section of the course!

The List and Iterator interfaces, and the ArrayList and LinkedList classes belong to this framework.

In this section, I'll revisit these types a little bit, to demonstrate how they fit into the big picture of this series of interfaces and classes.

I'll also cover some other very important types of collection objects, such as sets and maps.

By the end of this section, you'll have a few more classes in your tool box, for groups of many objects.

Let's get started.
