Why Use VBA for PowerPoint Automation?

1. **What is VBA?**
   a. A built-in programming language for Microsoft Office.
   b. Enables automation across PowerPoint, Excel, and Word.

2. **Why does it matter?**
   a. Saves time by eliminating repetitive tasks.
   b. Enhances productivity by automating slide creation and formatting.

3. **How does it help?**
   a. Generates slides with just a few lines of code.
   b. Ensures consistency and reduces manual errors.

4. **The result?**
   a. Write some code, hit a button, and PowerPoint does the work for you!
   b. Speeds up workflow while ensuring consistency and accuracy.
